

SYNOPSIS

Name: Sharvan Shreyas L

Reg No: U03MS23S0085

Department: Bachelor of Computer Application (BCA)

College: The Oxford College of Science

Year: 2026

Title:

Digital Notice Board System for College

1. Introduction

In colleges, notices are usually shared using paper notice boards, which can be time-consuming and inefficient. A Digital Notice Board System helps to display notices electronically using screens or web applications. It allows administrators to upload notices instantly, and students can view updates in real time. This system reduces paper usage and improves communication efficiency.

2. Problem Statement

Traditional notice boards have several issues:

- Notices can be missed by students
- Manual updating is slow
- Paper wastage
- No remote access

There is a need for a system that provides **instant, efficient, and eco-friendly communication**.

3. Objectives

- To develop a digital platform for displaying notices
- To allow admin to upload and manage notices
- To provide real-time updates to students

- To reduce paper usage
- To improve communication efficiency in colleges

4. Methodology

Step 1: Requirement Analysis

- Identify system users (Admin, Students)

Step 2: System Design

- Design interface (Login page, Dashboard, Notice display)

Step 3: Development

- Create backend (database)
- Build frontend (user interface)

Step 4: Implementation

- Admin uploads notices
- System displays notices on screen/web

Step 5: Testing

- Check system functionality and performance

Step 6: Deployment

- Launch system for college use

5. Tools and Technologies

- HTML, CSS, JavaScript
- Python / PHP
- MySQL
- Web application / Desktop system

6. Limitations

- Requires internet connection

- Initial setup cost
- Needs maintenance

7. Flowchart

8. Expected Outcomes

- Faster communication
- Easy access to notices
- Paperless system
- Improved student engagement

9. Conclusion

The Digital Notice Board System modernizes the traditional way of sharing information in colleges. It ensures quick communication, reduces manual effort, and provides an efficient digital solution for managing notices.
